

Fast Service

Discover Heating and Air services all makes of HVAC equipment. Our service schedule is QUICK, and you won't be stuck without heat or air for days waiting on a service call.

Quality Products

Discover Heating and Air installs Goodman HVAC equipment. Goodman is one of the largest manufacturers of residential and light commercial air conditioning, heating and indoor air quality products. Their focus is to build the most reliable and refreshingly affordable indoor comfort products in the market.

We install Goodman brand products because their HVAC equipment:

- Provides industry leading product warranties
- Offers greater reliability and longer-lasting performance than competing products

- Is designed for quick, trouble-free installations
- Makes reliable cooling and heating as affordable as possible

Discover Heating and Air offers FREE estimates for new system installations.

Discounts for Seniors and Military

Up to 10% off a new HVAC system installation. Call for details.

Efficiency Tips (cont.)

6. Don't run exhaust fans more than necessary. They pull heated air out of your house.
7. Turn down your hot water heater to 120 degrees.
8. Get your HVAC system inspected regularly.

About Us

Discover Heating and Air was founded by a group of real estate investors and contractors. With over 60 years of combined experience, they found they needed better, quicker and more economical heating and air service for their properties. As property owners, they saw the need for a company that was willing to diagnose problems and repair HVAC systems, not just try to sell expensive new units. Out of necessity for a job done right, they did it themselves and Discover Heating and Air was born.

After working on their own personal properties, family, friends and associates started requesting Discover Heating and Air to work on their homes and businesses. With many satisfied homeowners and property managers under their belt, Discover Heating and Air has decided to

grow their business and offer their expert services to the public.

Our service technicians are licensed and insured, so you know you're getting service you can trust. Our experienced technicians will properly analyze your HVAC unit and discuss your options with you - no high-pressure sales. We will help you decide if it is more cost effective to repair your existing HVAC system or purchase a new high efficiency unit where you will get your money back in energy savings.

Discover Heating and Air wants to help you with all your heating and air needs.

Hear What Our Customers Are Saying

My name is Kevin Foster, and I am a Kansas City area real estate agent. I have called Discover Heating and Air for repairs to HVAC systems of properties I have listed for sale when repairs are needed. I have also referred Discover Heating and Air to my clients and some of which have also used their services. Discover Heating and Air has always been quick to react when needed quickly, and they recommend only the work that is needed without trying to sell my clients a whole new system. Their pricing has been lower than most others I have used! I will always call Discover Heating and Air and recommend them to everyone!

Efficiency Tips

1. Change your air filter every month. A dirty filter makes your furnace work harder.
2. Make sure your registers and vents are clear. If they are blocked, it makes your heater run overtime.
3. Install a programmable thermostat. It automatically turns the temperature down when you sleep and go to work.
4. Install a humidifier. Moist air feels warmer, allowing you to turn down the thermostat (plus the added bonus of reducing static electricity).
5. Run ceiling fans clockwise to pull cooler air up and circulate your warm air in winter.

Service

24 Hour EMERGENCY Service

Service when YOU need it - not on our time schedule. No 4-hour window waiting times. We call when our technician is on his way.
